RUTGERSON
Best in action

You might think it started in 1976.
I would rather say the late 40s or early 50s.

A few nautical miles west of Marstrand there's a small island with a light house called *Pater Noster*. It was built in 1868. Pater Noster is the latin name of the prayer *Our Father* and its origin is much older than the light house itself. In the old days when seamen and fishermen approached Marstrand, they said that prayer in hope of reaching their destination.

Marstrand is a fabulous sailing venue but it can quickly turn dangerous with hard winds, rough seas, a strong current and thousands of treacherous rocks.

This is where I grew up in the 40s and 50s, this is where I learned to both love and fear the sea, this

is where the Rutgerson philosophy was founded; we know what boat fittings must handle during the worst of circumstances and that's why our core values are innovation, performance and reliability.

In 1976 I invented the revolutionary *Super Ring* and founded Rutgerson Marin. I wanted to offer modern, user-friendly and reliable boat fittings to sailors all over the world. Today, after 40 years, these values are still true and we will continue to develop smart and innovative solutions for many years to come.

At Rutgerson we don't compromise about quality. Never have. Never will. You just don't do that if you're born and raised in a place like Marstrand.

Göran Rutgerson

PORTLIGHTS

Rutgerson portlights are famous for their seamless design as well as extensive range of shapes and sizes. Portlights let light and air into the boat and keep water and moisture out. They also make a strong visual statement about the quality of the craft. The design and construction of Rutgerson portlights fit all kinds of boats, but they are in particular suitable for the high end of the market as they offer great upper class added value.

The Rutgerson portlights are deep drawn in Swedish stainless steel 316L and polished to a high lustre. The seamless construction ensures that the strength and elegant design will last far longer than conventional alternatives.

The tinted acrylic glass is either 10 or 15mm thick and the window area of Rutgerson portlights is in general largest on the market.

An essential factor is the seal around the opening window and frame. The most common materials used by other brands are cellular rubber or compressible foam, but they tend to disintegrate gradually over the years. These materials are also vulnerable to distortion due to the high pressure on the seal when the portlight is closed. Rutgerson portlights are equipped with a high quality silicone rubber gasket, which is very durable and thus prevents leakage.

The locking mechanism consists of Delrin spiral knobs, designed so that the closing pressure can be varied.

We offer a wide range of inner frames including frames made of stainless steel, which is completely unique. Inner frames are always included and the alternatives are chromed ABS (CH), Off-White ABS (OW) or Stainless Steel (RF).

The portlights are available in oval, rectangular, elliptical and round shapes in both fixed and opening models. All portlights are available in several different depths. They have a simple, fast installation and each product comes with a cut-out template. A range of optional fly screens is also available.

All Rutgerson portlights are CE approved in ocean category A, Area 1.

The hinges are made of polyamide and have a friction function, which enables the glass to stay open in different positions.

The seal is made of silicon rubber, which is the most durable solution and gives the portlight maximum performance. Additionally, the seal is incorporated into the acrylic glass.

The acetal knobs are designed so that the closing pressure can be varied.

Stainless steel reinforcement means that there is a frame on the inside of the acrylic glass that increases the rigidity of the portlight. It also gives the portlight a high-class impression when viewed from the inside.

Customised Portlights

Due to our flexible production facilities and knowledgeable staff, there are endless possibilities for customised portlights. Through the years we have produced numerous unique models for boats such as Moody 41, Elan, Storebro and many more (see pictures). It is possible to change shape, colour of the glass, colour of the stainless steel frame or innerframe and constructional alternatives such as the opening mechanism or hinges. We would be happy to discuss any ideas that our customers might have concerning new designs.

HATCHES

HATCHES

Using the best materials available, stainless steel, acrylic and composite, we offer a stunning range of hatches. There are three ranges with different design and application. The hatch frames have no welded seams to maximise the strength and integrity when confronted with the worst elements at sea. All hatches are CE approved for Area 2a.

Delivery time for our hatches is approximately 4 weeks. For detailed information, please see the specific hatch line.

HATCHES

Classic Hatch Line

Our Classic Hatch Line has an elegant, timeless design due to its seamless construction and mirror-polished frame. The hatch lid combines the highest grade Swedish stainless steel and acrylic glass. The frame is made of an extremely strong, UV-resistant composite material. The classic range is designed to compliment the aesthetics of all types of boats and generate a retro, classy feeling.

The hatches are available in different shapes: Round, square, half-round and rectangular. The thickness of the acrylic glass for the Classic Hatch range is 10mm.

HATCHES

Master Flush Hatch Line

The Rutgerson Master Flush hatches are at this stage available in sizes 10 ,44 and 60. The Master Line has a modern, trendy design that will give the boat a sporty image. As the name implies, the Master Flush hatch Line is flush but requires a recess on the deck. Once the recess is in place, however, the hatch is incredibly easy to install. The hatches consist of a faced, tinted acrylic glass and a frame made out of a high-tech composite. The handles can either be made of stainless steel or composite.

The combination of clever construction and the unique innovation of a composite frame results in the lightest and most durable hatch yet. The thickness of the acrylic glass for the Master Flush Hatch range is 12mm.

At a later stage size 60 will also be available, which will display the same superior level of performance as our existing hatches.

The Master Flush Line conforms to the CE standards EN ISO 12216:2002, EN ISO 9094-1 and EN ISO 9094-2.

Exclusive Flush Hatch Line

The Exclusive Flush hatch is the most luxurious hatch that you will find on the market. It is completely unique due to its stainless steel frame. This model is completely flushed against the deck, giving the boat a smooth and streamlined impression.

The boat designer can optimise the total construction of the deck due to the flush hatches' draining system, which is incorporated into the frame. Another unique aspect of this hatch is that the drainage hole is covered by a screen to prevent dirt from clogging up the drainage pipe.

The exclusive flush hatch does not require a recess on deck for installation. This is a very flexible solution, and it is possible to offer this model as a more luxurious option to the customer.

The flush hatch comes in two versions, one that suits teak-wooded decks and another for glass reinforced polyester decks. The different sizes are 200x340mm, 500x500mm and a round hatch with the diameter 500mm. These factors offer the customer the opportunity to choose a hatch that matches the boat perfectly. The thickness of the acrylic glass for the Exclusive Flush Hatch range is 15mm.

Rutgerson Flush Hatch Line conforms to the CE standards EN ISO 12216:2002 and EN ISO 9094-1 & 2

HF7111-2300

BLOCKS

The Rutgerson block assortment is unique in its design and functionality. The key to its success is that both the sheave and the cheeks are produced from a high-tech composite material of such a great strength that no stainless steel reinforcement is needed. Consequently, the overall weight is dramatically reduced. The new material has "smooth touch" properties and the work load is clearly marked in order to avoid uncertainty.

Spherical plain bearings are used for our assortment, which render the blocks very strong and completely maintenance free. Plain bearings will never deform under static high loads like ball bearings and our blocks do not require the initial excess of power for the sheave to start moving, which is a common problem with ball bearing blocks.

The entire production chain takes place at our premises in Marstrand. In-house sailing experience together with advanced engineering ensures that you can rely on our blocks in all weather conditions! They are incredibly versatile as they are suitable for both inshore and offshore sailing, ranging from dinghies to racing yachts. They can also easily be adapted to your needs and your boat due to a range of different fastening alternatives.

The Rutgerson wire block assortment has a vast range of application areas and can take loads up to six tons. They are made of Swedish high-grade stainless steel of the highest quality available. The blocks have been optimised for wires. The blocks have an elegant design and are completely maintenance free. The wire blocks are perfect as for example back stay adjusters.

At Rutgerson we demand total reliability from all our products.

The block load is determined by the angle of the lines. If the pulling force from the lines are coming from the direct opposite side of the attachment point of the block, then the load factor will be 200%. So if you have 100 kg of force in the lines and the deflection angle is 0° (line force 180° from block attachment) then the block load will be 200 kg. And if the line force is 150 kg and the deflection angle is 100° then the block load will be 194 kg ($150\text{kg} \times 1,29 = 193,4$)

B3006XXBS	Snap Shackle block 60	60	750	1700
B3008XXBS	Snap Shackle block 80	80	1500	2700

The black line blocks from Rutgerson are available with snap shackles. Simply add the ending BS to the standard block article number. For example B300501BS.

Note that the safe working load and breaking load differ when the block is fitted with a snap shackle.

Stand Ups

Part no	Product description	Weight
B600543	Rubber Cone + plate for 50mm	85
B600643	Rubber Cone + plate for 60mm	85
B600843	Rubber Cone + plate for 80mm	166

Stand-ups are suitable for blocks with a standard shackle and are commonly used for tackles or by the mastbase

FOOTBLOCKS

Footblocks are a vital part of the deck equipment as they must be able to take very high loads. In fact, the loads imposed on footblocks are among the highest that a running rigging can generate. Due to the construction and solid materials of Rutgerson footblocks, the load to size ratio is among the best on the market.

Spherical plain bearings that are typical for Rutgerson blocks outperform ball-bearings constantly and this is also true for our footblocks. Due to the plain bearing construction, all our blocks are also maintenance free. Another important advantage is the fact that they are stackable and reversible in order to maximise efficiency.

The footblock assortment is divided into two ranges, anodised aluminium sides and high-tech composite sides.

Footblocks

Part no	Product description	Length [mm]	Sheave Ø [mm]	Hole spacing [mm]	Jammer radius [mm]	Sides and sheaves	Safe working load [kg]	Breaking load [kg]
B300041B	Footblock 40 single	82	40	49	-	Composite	600	1200
B319040B	Footblock 40 single with jammer	82	40	49	77	Composite	600	1200

B309101	12 - 20	3 x M10	807

DECK BLOCKS

Rutgerson has developed two models of deck blocks, one is installed on top of the roof and the other is installed in the cockpit in order to lead the line.

This block range was developed for the boat brand Sense, but it is applicable for a wide range of boats and applications.

The blocks are made of anodized aluminium and a 50mm aluminium sheave with a kevlar reinforced bearing. This allows the block to reach a breaking load over 3 tons.

Part No	Product description	Height [mm]	Width [mm]	Length [mm]	Safe working Load [kg]	Weight [gr]	Hole spacing [mm]
B309500BR	Top roof blocks, 50mm	69	30	84	1800	212	50 and 65
B309501BR	Bottom roof blocks, 50mm	72	30	70	1800	168	55

VIKING SERIES ROPE CLUTCHES

Rope Clutch RC75X

Like the historic Vikings, Rutgerson rope clutches are strong, durable and originate from the North where sailing conditions are tough. Rutgerson rope clutches can take much higher loads than equivalent sizes of other manufacturers on the market due to a unique combination of clever construction and high-quality materials. The housing is made of a black high-tech composite of high strength, whereas the other parts are made of either anodized aluminium or stainless steel.

Our rope clutches have a clever solution for endless lines. Due to the fact that the housing can easily be removed from the mounting plate, the rope clutch can easily be installed on or detached from endless lines such as furling lines. The rope clutch is the only one that can be installed by one person on the deck.

You will find that the handling of the lines much easier with Rutgerson rope clutches. This is because it is the only rope clutch on the market fitted with an integrated low-friction sheave, which ensures that the rope runs smoothly - both when winching and when hauling by hand. Naturally, the clutch allows continued trimming of the rope even when it is in a locked position.

Rope clutches RC75X

		A	B	C			D x E	
Part No	Product description	Height [mm]	Width [mm]	Length [mm]	Max load [kg]	Rope dimensions [mm]	Hole spacing [mm]	Weight [gr]
S600701	Single rope clutch RC75X	70	39	139	750	8 - 12	79 (M6 bolts)	352
S600702	Double rope clutch RC75X	70	66	139	750	8 - 12	79 x 28 (M6 bolts)	618
S600703	Triple rope clutch RC75X	70	94	139	750	8 - 12	79 x 28 (M6 bolts)	894
S600705	Rope clutch RC75X 5units	70	154	139	750	8 - 12	79 x 28 (M6 bolts)	1400

Please note that the test for this diagram has been made on standard polyester ropes so performance can vary depending on the rope quality such as dyneema.

ROPE CLUTCH RC120X

The bigger rope clutches of the Viking Series, RC120X and RC2000, have been developed especially for modern types rope such as Lycra and Dyneema.

This rope clutch is based on the same technical concept as the smaller Viking RC75X but has been perfected. The handle has been equipped with a revolutionary needle-bearing, which gives the RC120X a performance that was unthinkable before. The new handle has a built-in friction function that ensures that the handle stays in one position, open or closed. Releasing the desired load requires little effort, even during very heavy loads. It is also possible to quickly and without effort close the rope clutch.

The housing is made of black, high-tech composite and the handle is polished aluminium for an elegant design. When installing the rope clutch it is either possible use the endless lines concept as the RC75X or installing the complete product at once. Lift the handle until you can grip the edge of the cam. Hold it up while bringing the handle backwards until the screw hole on the base plate is clearly visible from above. The RC120X has two hole configurations for installation for maximum flexibility, 70 and 85mm.

Warning: The bigger rope clutches are developed to release the load easily, so make sure when releasing high loads not to keep your hands close to the rope entrance. Always put the line back on the winch before releasing the load for a safe rope handling.

S601203	Triple rope clutch RC120X	81	102	165	1200	10-16	70 x 32 and 85x32 (M6 bolts)	1621

Core benefits

- Superior working load
- Easy and clever installation
- Elegant design
- Minimum friction

ROPE CLUTCH RC2000

The largest rope clutch of the Viking Series has the most innovative design yet and is completely unique on the market. It has been developed to take extreme loads up to 2 tons with minimal effect on the rope. Despite the high loads the handle is incredibly smooth to release, you can lift it with one finger!

The housing is made of black anodised aluminium and the handle comes in either polished aluminium or mirror-polished stainless steel for a sleek, modern look.

Warning: The bigger rope clutches are developed to release the load easily, so make sure when releasing high loads not to keep your hands close to the rope entrance. Always put the line back on the winch before releasing the load for a safe rope handling.

DECK FILLERS

Rutgerson proudly presents a new assortment of Deck fillers. The range includes deck fillers for Diesel, Petrol, Waste in two dimensions, Water and Deck Access. As usual, Rutgerson's new products bring something new and innovative to the market and in this case a unique link system. The link is made of the same material as cable ties, which is extremely strong compared to other composite materials. It is constructed so that it is incredibly easy to replace without any work from the inside, but just from the deck. The deck fillers are colour-coded in order to facilitate the distinction between different deck fillers. The design with high grade stainless steel and high tech composite is much more corrosion resistant compared to other solutions on the market such as casted steel. Furthermore, due to a different opening solution than the traditional thread (except for waste), it is very quick to open. Just turn it 90 degrees using a winch handle or a key and the cap is free. The deck fillers for waste correspond to the standard ISO 8099.

PADEYES

The Rutgerson padeyes have an incredibly elegant and stream-lined design – a jewel on your deck! They are made of high quality stainless steel. The padeyes are excellent for mounting blocks on deck or as attachment points for safety lines, staysails, reefing blocks, jibe preventors and many other application areas.

Flexibility is the main characteristic of Rutgerson padeyes as they can be mounted practically anywhere and can take very heavy loads. Additionally, they come in three different sizes for maximum use. They adjust themselves to the angle of the load and fold down when they are without load in order to minimize the risk of hurting the crew and equipment.

Rutgerson padeyes correspond to the declaration of "Man overboard prevention" SS-EN ISO 15085:2003.

Core benefits

- Wide range of application areas
- Very high working load
- Stream-lined for aesthetic and practical reasons

Padeyes

Stainless steel fittings

Snap Shackle

A snap shackle is a fast action fastener which can be implemented single handed. It uses a spring activated locking mechanism to close a hinged shackle, and can be unfastened under load. This shackle is like our other shackles and hooks made of a high-quality stainless steel, namely AISI316.

Pelican hook

The pelican hook is suitable for several areas of usage, such as the safety lines. The fitting is made of high-quality stainless steel, namely AISI316. Both the snap shackles and the pelican hook conform to the following standard:

Small craft – Man –overboard prevention and recovery ISO 15085:2003

E050075	Pelican hook	600	1200	67	75 x 45

DECK ORGANISERS

The Rutgerson deck organisers are designed to perfectly match sailors' needs. The assortment consists of two different ranges. The traditional aluminium range is available in five different sizes with two, three, four, five or six composite sheaves. The extensive range results in high flexibility, since sailors can choose sizes according individual preference and deck layout.

The new Black Line range is made of black, high-tech composite with either two or four sheaves. Due to the properties of the material, the product weighs very little in relation to how high the working load is. In addition, the composite has smooth-touch properties and the black colour matches the rest of the Rutgerson deck hardware assortment.

The deck organisers can be stacked on top of each other to maximise efficiency of space and each sheave is through-deck bolted, which results in a high breaking load. Special bolts are available separately.

The deck organisers are 31mm high and the sheaves have a diameter of 40mm. The breaking load of each sheave is 2000kg and the maximum working load is 750kg. The recommended rope dimensions are 8-14mm.

Core benefits

- High working load
- Incredible strength to weight ratio
- Smooth-touch composite with unique design

MAINSHEET SYSTEM

Control the power!

The mainsheet is one of the most exposed parts of a yacht's equipment due to the extreme level of stress during sailing. The Rutgerson mainsheet system increases the durability and performance of that part due to its clever construction and Roll-link function. The system is built up in modules, which makes it easy to adapt to different types of boat and specifications. The tracks and travellers are made of high-quality anodised aluminium.

Rutgerson is very proud to announce that the product was proclaimed "Best in Test" among other traveller systems available on the market according to a test performed by the German magazine Segeln in association with Chalmers University (Technical university in Sweden). The test was designed to give an objective measure of the sliding resistance under realistic conditions, with a vertical pre-load corresponding to rough weather conditions.

"It was found that the Rutgerson slider is superior in horizontal sliding under heavy conditions. Once again it was shown that Roll-links are clearly superior to ball bearings" (German magazine Segeln)

The unique construction of the track system renders the product completely safe. The travellers cannot be detached from the track by force or accident, so even if the product breaks under extreme conditions the traveller will stay attached to the track preventing injuries to the crew and the equipment.

Advantages with Roll-links:

- Maintenance free travellers that will always run smoothly due to the stainless steel link that keeps the rolls apart. This construction prevents any obstruction or clogging with salt or dirt. The roll-link "cleans itself" due to its unique construction.
- Easy to assemble because the rolls are held together with a stainless steel link. The fact that all rolls are held together facilitates both installation and adjustment.
- The force is spread over a larger area, which results in a reduction in strain on the material. The balls in ball bearing systems will deform into an egg-shape under pressure and stop running smoothly. Roll-links will always retain their original shape.
- The higher stress on the product during rough weather conditions, the better performance.

The Rutgerson mainsheet system will make your sailing experience effortless and hassle-free, upgrade your boat to the Rutgerson standard.

The maximum load on the mainsheet track depends on the distance between the sides in the cockpit when the mainsheet track is unsupported. That distance is called the span length. To obtain the maximum load, measure the distance and insert in into the graph.

This graph is a general guide to help sailors choose the correct track for their boat. This information is only true when the track has been fitted according to Rutgerson's instructions.

GENOA SYSTEM

It is possible to adapt our genoa system so that it perfectly matches your boat and your needs. The system is built up in modules with varying application. The genoa travellers come in three sizes for boats up to 50ft. There are two models available, one with a plunger stop for tracks with stop holes and the other with a 2:1 control line sheave for tracks with a concealed fastening mechanism.

The centre-pin pivoting main body permits alignment with the sheets, not only sideways but also across the traveller car. Another crucial advantage with the Rutgersen Genoa traveller is that the "head" stands up by itself, minimising the risk of chafing/tearing of the sheet. To use the traveller, either lock the car in place with the plunger stop or fix it in the open position for a "semi-floating" function.

Rutgersen genoa travellers can be smoothly adjusted under load due to a composite material fitted between the traveller and the track. The two sheaves simulate one larger sheave, giving a low sheeting point and minimising chafing on all components.

As with all our track systems, no maintenance is required.

The maximum load on the control line depends on the deflection of the sheet (Φ). In the graph you will find the load factor for the control line that corresponds to the different sheet angles. To obtain the control line load, multiply the sheet load with the control line load factor. If the sheet load is 100kg and the sheeting angle is 40 degrees, the control line load is $100 \times 0,23 = 23\text{kg}$.

SELF-TACKING JIB SYSTEM

The Rutgerson self-tacking jib system does all the work for you. It is built around our roll-link traveller system, which can be adjusted to fit all kinds of boats. The travellers can take oblique loads up to 45 degrees from vertical. Side friction is minimal due to the successful Roll-link concept. Our self-tacking jib system has been developed and tested to withstand the toughest conditions at sea.

The track can be bent horizontally, vertically or both in a compound bend. For tracks with a radius that is greater than 3700mm or smaller than 3400mm, a customised track can be ordered.

Like all our track systems, the self-tacking jib is completely maintenance free. Just rinse the track and traveller two or three times per season with fresh water.

In order to establish the correct bending radius for you boat, please do the following:

1. Measure the distance between the front of the mast and the headstay ("J" measurement).
2. The bending radius should be 95% of "J".
3. The radius can be altered from 3400mm to 3700mm by gently applying the full body weight onto the track with the upper surface facing down.

Enjoy hassle-free sailing with the Rutgerson Self-tacking Jib System.

GENERAL WARRANTY & KEY TERMS OF SUPPLY BY RUTGERSON MARIN AB

WARRANTY

1) PERIOD OF WARRANTY

Rutgerson Marin AB issues a general warranty time durable for three years against malfunction or breakage from the date of delivery.

2) WARRANTY COVERAGE

Products sold by Rutgerson Marin AB and in normal and customary use, are conditionally warranted against malfunction or breakage. The warranty does not cover:

- i) Defects or damage resulting from use of the product in other than its normal and customary manner;
- ii) Defects or damage from misuse, accident or neglect;
- iii) Defects from improper testing, operation, maintenance, installation, alteration, modification or adjustment;
- iv) Damage from unauthorized repair or alterations;
- v) Damage from corrosive materials, ultra violet degradation, wear or tear beyond the specification of the case or enclosure.

3) WARRANTY PROCEDURE OF SERVICE OR REPLACEMENT

Notice of a claim for defect, service or replacement covered by this limited warranty shall be made promptly and in writing to the local Rutgerson distributor that supplied the product or to Rutgerson Marin AB, Box 84, SE-442 19 Marstrand, SWEDEN. Products returned for service or replacement under this limited warranty must be assigned a valid RGA Return Goods Authorization number by Rutgerson Marin AB. Unidentified and unauthorized goods returned to Rutgerson Marin AB will NOT be approved or eligible for further investigation.

The customer is responsible for undertaking all expenses associated with transporting the goods to and from Rutgerson Marin AB or the local Rutgerson distributor that supplied the product. If the investigation of the product and the warranty claim reveals that the defect, malfunction or breakage is not covered by this limited warranty, the customer will be contacted and advised with respect to additional cost in conjunction with service or replacement.

For approved RGA goods, please send these together with assigned RGA documents to:

PURCHASE ON APPROVAL

Rutgerson Marin AB issues a general purchase on approval period durable for 60 days after delivery. Products that are subject for return needs to be unused and delivered to Rutgerson Marin AB in their original packing and according to the procedure stated in section (A3) above. Returned products will thereafter be subject to investigation and upon approval a 15% handling fee of the original purchase amount will be surcharged to all eventual credits. For all customized or one-off items, purchase on approval does not apply.

SUPPLY

1) PACKING QUANTITY

Products are supplied in stated packing and minimum purchase quantities only. For supply in smaller and/or customized quantities, additional terms will apply. For further information about alternative supply conditions, please contact Rutgerson Marin AB.

2) DELIVERY TIME

All official delivery times endorsed by Rutgerson Marin AB are estimated and can be subject to changes. Rutgerson Marin AB is in the event of such related changes legislated to inform the customer.

3) UNANTICIPATED DEFECTS & DELAYS

Rutgerson Marin AB shall not be liable for unanticipated defects/delays, nor shall it be liable for any damage, whether direct or indirect, beyond the provisions set forth above or otherwise provided to customers under statutory law legislation. In connection with delivery of incorrect or defective goods, the customer must promptly submit a complaint to Rutgerson Marin AB.

DEFINITIONS

1) SAFE WORKING LOAD (SWL)

Is the maximum static and/or dynamic load at which the product will still function without excessive friction, distortion, wear or permanent deformation of its components. Above this load, systems may fail, moving parts may seize and stainless steel or plastic components may begin to bend, stretch or otherwise deform. SWL should never exceed 55% of the breaking load (BL), and should never be exceeded in use.

2) BREAKING LOAD (BL)

Is the load at, or around which, a major failure can be expected to occur to some part of the product's structure when new. Plastic components may split, rivets may give way, shackles may break and other metallic components may fracture. No product should be used at more than 55% of the breaking load.

The Rutgerson original philosophy

It is my firm belief that innovator, designer or manufacturer of yacht fittings should know the open sea in really bad weather to understand what is going on.

The Rutgerson staff have been out there...

A handwritten signature in black ink, appearing to read 'Göran Rutgerson'.

Göran Rutgerson - 1976
