

HEINO O. EMEIS

Yacht School EASYSAIL

Boat type: Bavaria 42

Model: EXTURN 300

Mounting: bow thruster

Location: Port d'Antrax, Spain

"Because of constantly increasing narrowness in yachting ports I was forced to make an investment decision for a bow thruster. With my educational and charter yachts I have to offer the customer optimal equipped boats. In November 2008 I decided chose EXTURN because it can be mounted in very short time, there is no cost and time consuming GRP work, and because of its compact and streamlined design. The simple installation has fully met my expectations."

"After three months of nearly daily use, I can tell that the purchase decision for EXTURN was absolutely right."

"During the daily educational routine the quiet operation of EXTURN, while maneuvering within the port, attracted attention and led to astonishment not only of the crew members but also of other skippers. It's logical because the EXTURN thruster is mounted under the hull - much deeper than the conventional tunnel variant. Therefore it is much more effective and develops an impressive powerful side thrust. After three months of nearly daily use, I can tell that the purchase decision for EXTURN was absolutely right."
