

DIETER RADLER

Boat type: Elan 434

Model: EXTURN 300

Mounting: bow thruster

Location: Murter, Croatia

“My sailing boat, an Elan 434, is used on the Croatian coast as charter boat as well as for my private pleasure. More and more charter guests asked before the booking if my boat has a bow thruster installed, for some interested clients it even was a requirement for contract agreement. I as an experienced sailor, also had wished to have a bow thruster in some awkward situation in the cramped and narrow marinas along the Croatian coast, but the heavy noise and disappointing performance of my anchorage neighbours’ thrusters held me off until now.”

“Conclusion: absolutely enthusiastic, exactly what I wanted. Gratulation to the MARINNO developers.”

“When I found out about the innovative EXTURN solution, and was able to experience it myself on a test boat during the exhibition in Friedrichshafen (Lake of Constance), it was clear for me: That’s the ideal solution! Two months ago EXTURN was installed by a specialist in Murter within a day - for safety reasons also with a massive hoop guard to avoid damage by the unexperienced charter guest. Since then not only did the charter bookings of this now complete equipped boat increase, but also I have experienced benefits in comfort and safety on my private sailing trip during Easter week and can now let my wife dock without any fear, too. Conclusion: absolutely enthusiastic, exactly what I wanted. Gratulation to the MARINNO developers.”
